CAMSHAFT AND FOLLOWER LUBRICANT

ASSEMBLY LUBRICANT

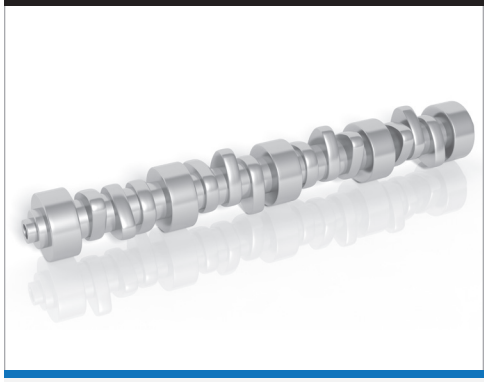
PRODUCT DESCRIPTION

Camshaft and Follower Lubricant is designed to be used as a lubricant to apply to potential wear surfaces before assembly in order to prevent metal to metal contact upon startup before adequate lubrication is supplied. Provides three times greater film strength than conventional motor oils and will not clog oil filters. This product clings to all surfaces and is an excellent rust inhibitor, allowing the storage of parts for many months. A thin film of protection is all that is required on mating parts. Camshaft and Follower Lubricant will mix with motor oil and can be used on all lubricated parts such as followers, pistons, bearings, and bolt threads. Use only a small amount on bearing and piston surfaces - too much can make it difficult to turn over the engine. Camshaft and Follower Lubricant is an excellent corrosion inhibitor and can be used on machined surfaces to provide long-term corrosion protection. Do not use on exhaust bolts or other high temperature bolts which require an anti-seize. This product is also an excellent polishing oil for camshafts or crankshafts.

PRODUCT BENEFITS

- High viscosity to cling to unassembled parts
- Excellent anti-wear package to prevent excessive wear on startup
- Very low odor provides for good operator acceptance
- Excellent stick-slip lubrication to assure smooth break in
- Designed to be painted on the metallic surface, or whole parts may be dipped if desired

PRODUCT APPLICATION



APPLY WITH BRUSH OR DIP

USED FOR BREAK-IN ON:

- Camshaft lobes and bearing surfaces
- Rollers
- Followers
- Crankshaft pins and bearings
- Rocker arms

TYPICAL PROPERTIES

Fluid Type	Straight oil
Appearance	Dark green
Specific Gravity @ 60°F (15°C)	.920
Viscosity (100°F)	2000 SUS
Viscosity (40°C)	432 cSt
Flash Point, COC	560°F (293°C)

PRODUCT NUMBER

8435000000
