

A/C FLUSHING SOLVENT

REFRIGERANT FLUSHING SOLUTION

PRODUCT DESCRIPTION

A/C Flushing Solvent is a refrigerant flushing solution used to flush out old A/C refrigerants and contaminants when changing and charging new refrigerant. A/C Flushing Solvent is unique because it must be compatible with both the old mineral oil and with the new lubricants as well as with the old and new refrigerants. A/C Flushing Solvent can also be used for cleaning contaminants from the system.

Old Freon 12 systems can be retrofitted for use with R134 by a procedure which includes pumping out and reclaiming the old refrigerant using approved equipment, draining the lubricant from the compressor, and then flushing out the remainder of the old oil with a special solvent.

PRODUCT BENEFITS

- Flushes lubricant contaminants and solids from A/C system lines
- Compatible with CFC, HCFC, and HFC refrigerants
- Compatible with mineral, ester, and PAG oil lubricants

PRODUCT APPLICATION

FOR USE ON A/C REFRIGERANT SYSTEMS CONTAINING:

- R12
- R134
- PAG's
- Esters
- Mineral Oils

PRODUCT NUMBER

8402900000
